REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claim 13 is the inclusion of the limitations of an ink jet recording apparatus that includes an on-off valve unit having a valve member provided to an air flow passage from the air pressurizing pump to the main tank and opened under a given or more air pressure for maintaining the air pressure in the air flow passage within a predetermined range; and a drive system capable of forcibly opening the valve member in the on-off valve unit, thereby releasing a pressurization state of the air pressurizing pump. It is these limitations found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The primary reason for allowance of claims 28-42 is the inclusion of the limitations of an ink jet recording apparatus that includes a pressure detector, provided to the air flow passage between the air pressurizing pump and the main tank, for detecting pressure of the pressurized air, wherein driving the air pressurizing pump is controlled based on a control signal generated according to the pressure detected by the pressure detector, the pressure detector having a diaphragm displace upon reception of the air pressure of the pressurized air; and an output generation system for generating a control signal based on the displacement amount of the diaphragm. It is these limitations found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The primary reason for allowance of claims 43 is the inclusion of the limitations of an ink jet recording apparatus that includes a pressure detector, provided to the air flow passage between the air pressurizing pump and the main tank, for detecting pressure of the pressurized air, and a control system for driving the air pressurizing pump if a pressure detection value obtained by the pressure detector does not reach a predetermined pressure value, and stopping the air pressurizing pump after expiration of a predetermined time if the pressure detection value obtained by the pressure detector reaches the predetermined pressure value. It is these limitations found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kimura (US 4,558,326) discloses a purging system for an ink jet recording apparatus. Taylor et al. (US 6,220,699 B1) disclose a method and apparatus for actuating a pump in a printer. Cook et al. (US 6,224,198 B1) disclose method and apparatus for refilling ink jet cartridges with minimum ink loss. Thielman et al. (US 6,296,353 B1) disclose an ink container with secondary containment for ink supply.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
